

\* There is possibility of an error having occurred either in the wiring or my measuring techniques  $\rightarrow$  I am unable to determine it at this time.

\* Though "self-sustained" induction (what is show on pg 9/2) seems promising, I am unsure if we will continue on this path or move to a new method or platform for V3. fbd.

\* Other rectification methods are being tried today with capacitors ( $-1t$ ); but I am seeing traditional conservation of  $E$  ( $< 100\% \text{ Eff}$ ) results.
