

Auroboros V2.0 ... & testing

* V1.0 has a design flaw & was abandoned. V2.0 is utilizing 2 coils in our MEG model.

⇒ The goal is to induce electro magnetic field effect (EMF) from 1 coil into the other so that they cycle back & forth gaining energy from the others magnetic curl resulting in over unity effect.

→ Current testing is underway & negligible effects are being observed.

V2.1
* has windings flipped so resultant \vec{B} field curls cancel instead of add.
